

Vegetation Management

Fact Sheet – Crafers Park ‘n’ Ride

The removal of some vegetation is needed to allow us to construct the new Crafers Park ‘n’ Ride facility.

Minimising vegetation impacts

The project has been carefully designed and staged to minimise vegetation impacts as much as practically possible, however some vegetation removals are unavoidable.

Two significant trees and eight regulated trees will need to be removed. Pruning of one other regulated tree and removal of shrubs, less mature trees and ground covering, is also required.

As part of the detailed design process, vegetation surveys were undertaken to inform the design and construction methods. Where possible, options have been considered and adopted to minimise impacts on trees and other vegetation.

Managing vegetation removals

Any vegetation impacts will be managed in accordance with legislative requirements and the Department for Infrastructure and Transport’s guidelines. Approval to remove this vegetation has been granted by the Native Vegetation Council.

Removal of vegetation will be carefully supervised by an arborist as required. All trees will be inspected prior to removal and if animals are found, they will be relocated under the supervision of a suitably qualified fauna handler.

Weeds and non-native vegetation will be disposed of offsite appropriately.

Timing and location

The majority of vegetation removal will occur to the southeast of the existing Crafers Park ‘n’ Ride, next to the Crafers off ramp (westbound) and the South Eastern Freeway. Some removal will also occur alongside Waverley Ridge Road beside the Crafers off ramp (westbound).

Vegetation removal will occur in February 2024.
