

# Gawler Rail Electrification Project

The Australian and South Australian governments are jointly funding the electrification and modernisation of the Gawler rail line to deliver a faster, cleaner and more reliable service, delivering an electrified network through Adelaide from Gawler to Seaford.

Passenger rail services are expected to be commencing in April 2022.

## The benefits of an electrified Gawler rail line include:

- clean and green high performance trains delivering an improved customer experience;
- better reliability and safety; and
- encourage people to take public transport and leave their cars at home.

## Scope of works:

- electrification of the Gawler rail line and Dry Creek Railcar Depot;
- pedestrian level crossing enhancements;
- acquisition of 12 additional three-car electric trains (introduced in stages following completion of the electrification works);
- replacement of the signalling system (including Automatic Train Protection provision); and
- fencing of the rail corridor for improved safety.
